

AccountX

The Next Generation Accounting System.

AccountX is a cloud-based accounting software from multi-companies that leverage on Mobile Internet Technology that allows you to access your financial data from anywhere and anytime, using any devices. It is a safe and secured platform that allows you to streamline your accounting processes to gain greater insight for your business performance. You can make better business decisions based on real-time accounting information's from AccountX.

General Ledger.

Define chart of account code is made easy and flexible. You can define meaningful and Multi-levelled GL account code with AccountX. Defined Chart of Accounts can easily be shared to prevent duplication across corporations, divisions, and departments.

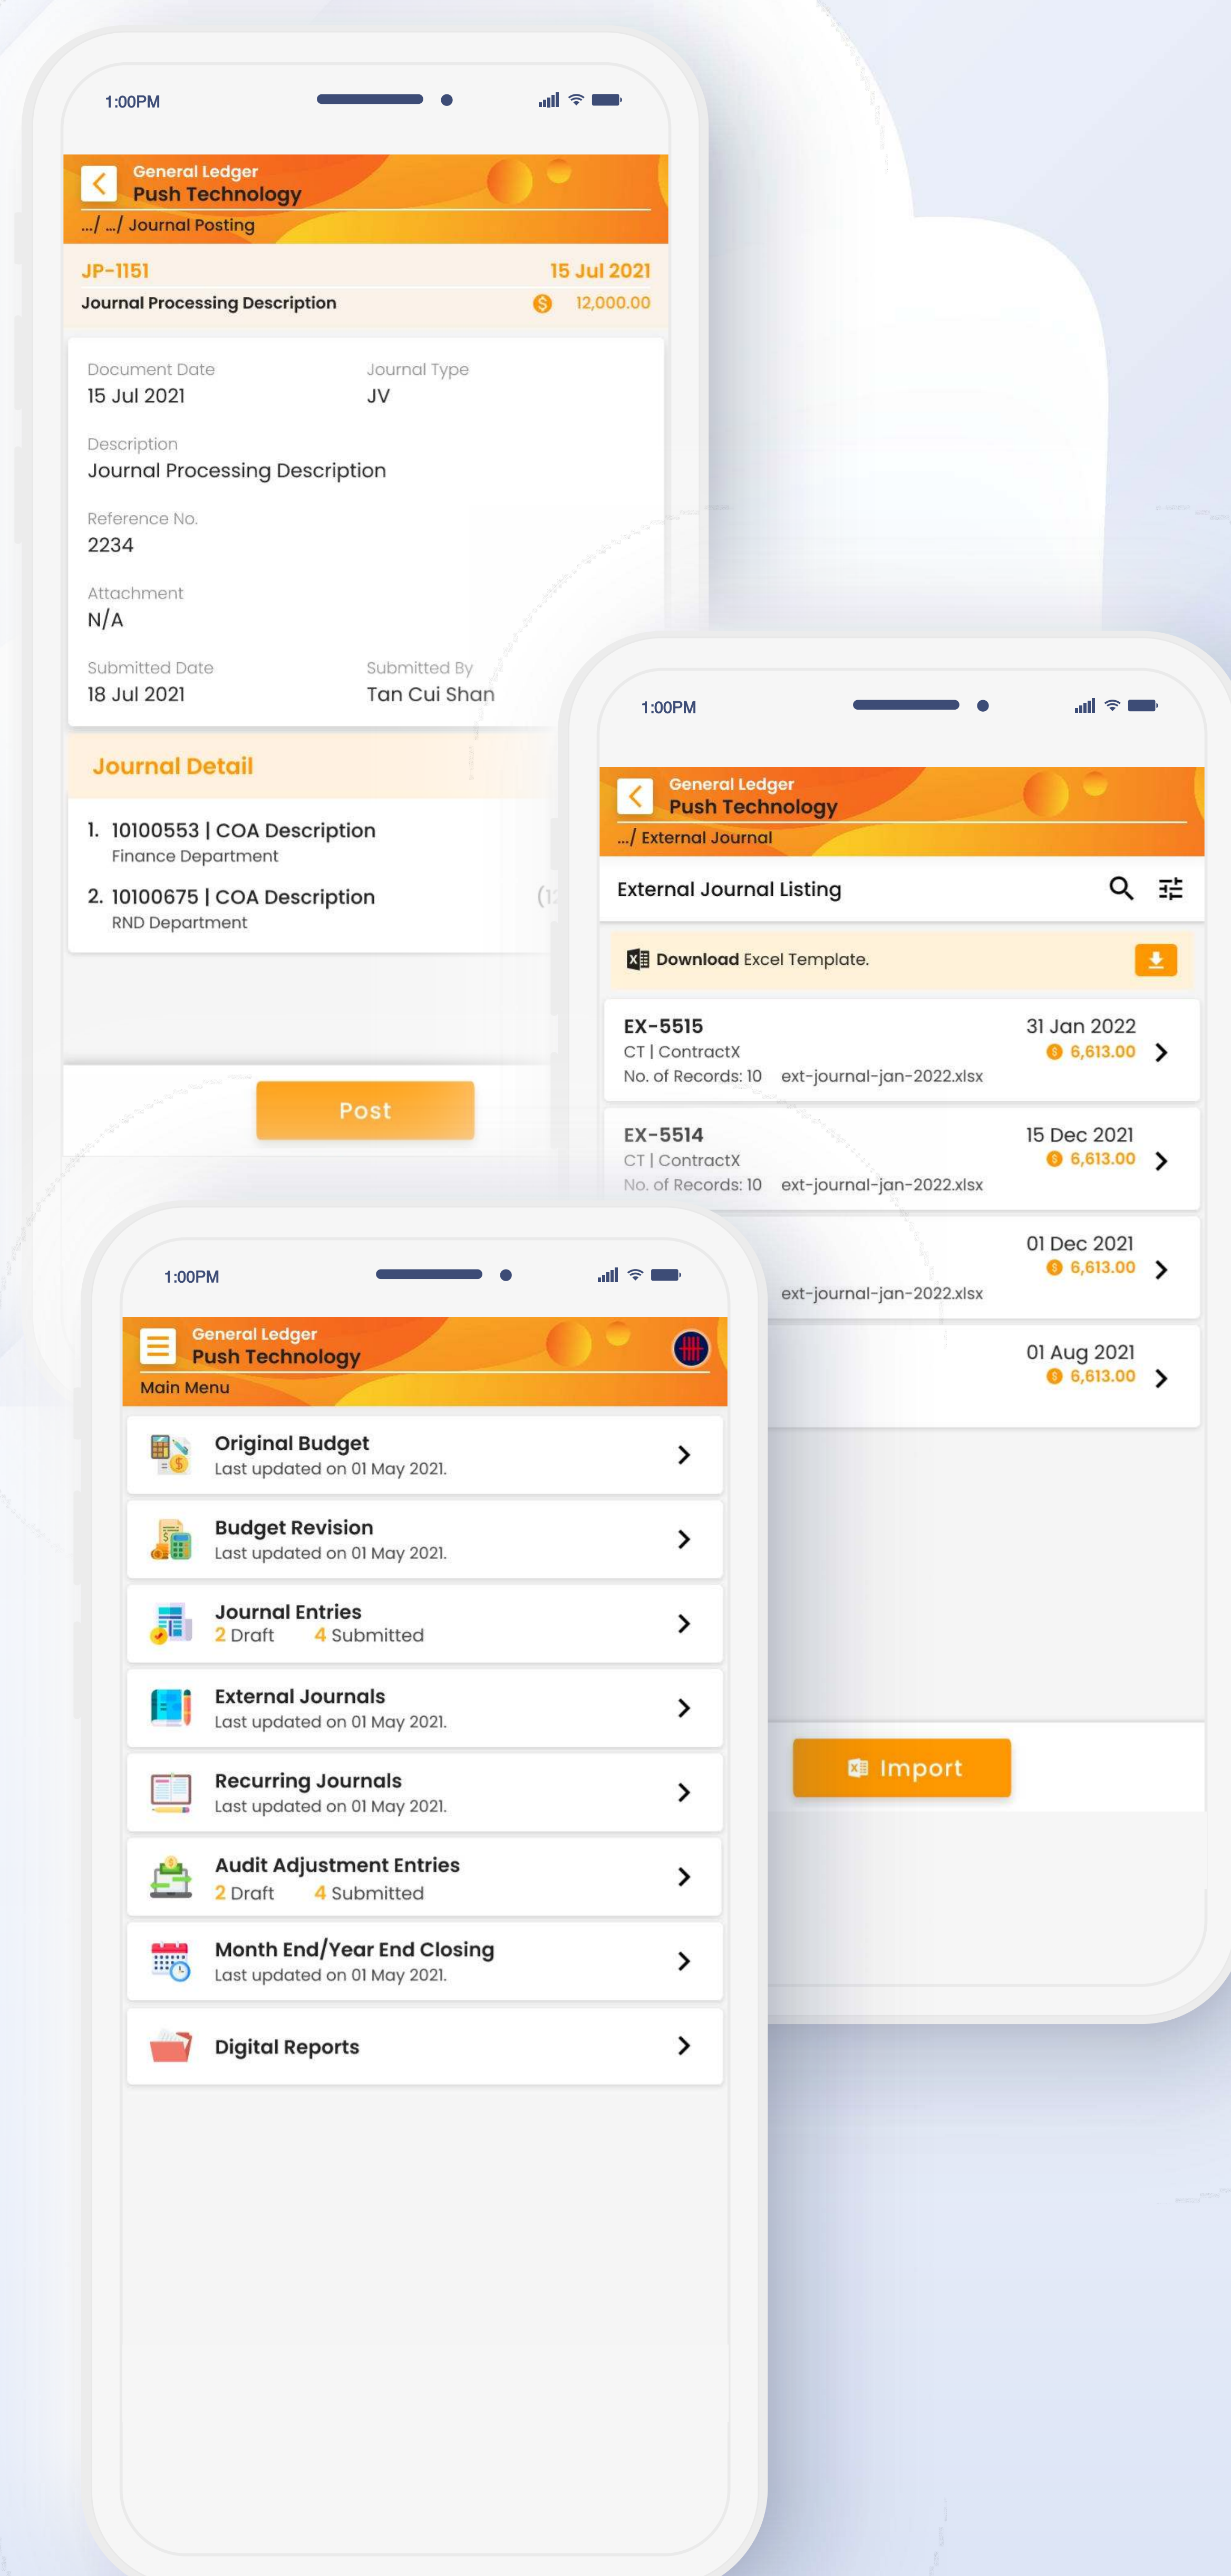

AccountX keeps track of original and revised budgets. You can always compare budget with actual to know your business performance anytime.

GL journals can be imported from external system or manually entered. You can have a listing of submitted journals and approve them individually or by batches. Once approved, these journals will be posted to various chart of accounts.

For recurring journals, you can pre-defined them and post them periodically.

During a fiscal year, it allows "Previous Period Adjustment" and "Audit Adjustments."

By adapting Mobile Internet Technology, AccountX features an extremely versatile financial reporting tool to define unlimited reports in different types of formats with summation and comparison capabilities.

Cash Book.

Manage multiple cash and bank accounts at one-go. Our system maintains a full ledger all cash related transactions to check real time balances anytime, in few clicks away.

Entering payment and receipt transactions with valid date will be defined in policy setting. Transaction is save as a draft before submitting for approval. Transactions will be posted upon approval is received.

To keep important transactions up to date such as payment and receipt, transactions can be conveniently imported from an external system.

Worry not, the system will also keep track of inter account transfers.

Bank reconciliation is easy with digitised bank statements. Alternatively, you can do manual matching.

Account Receivable.

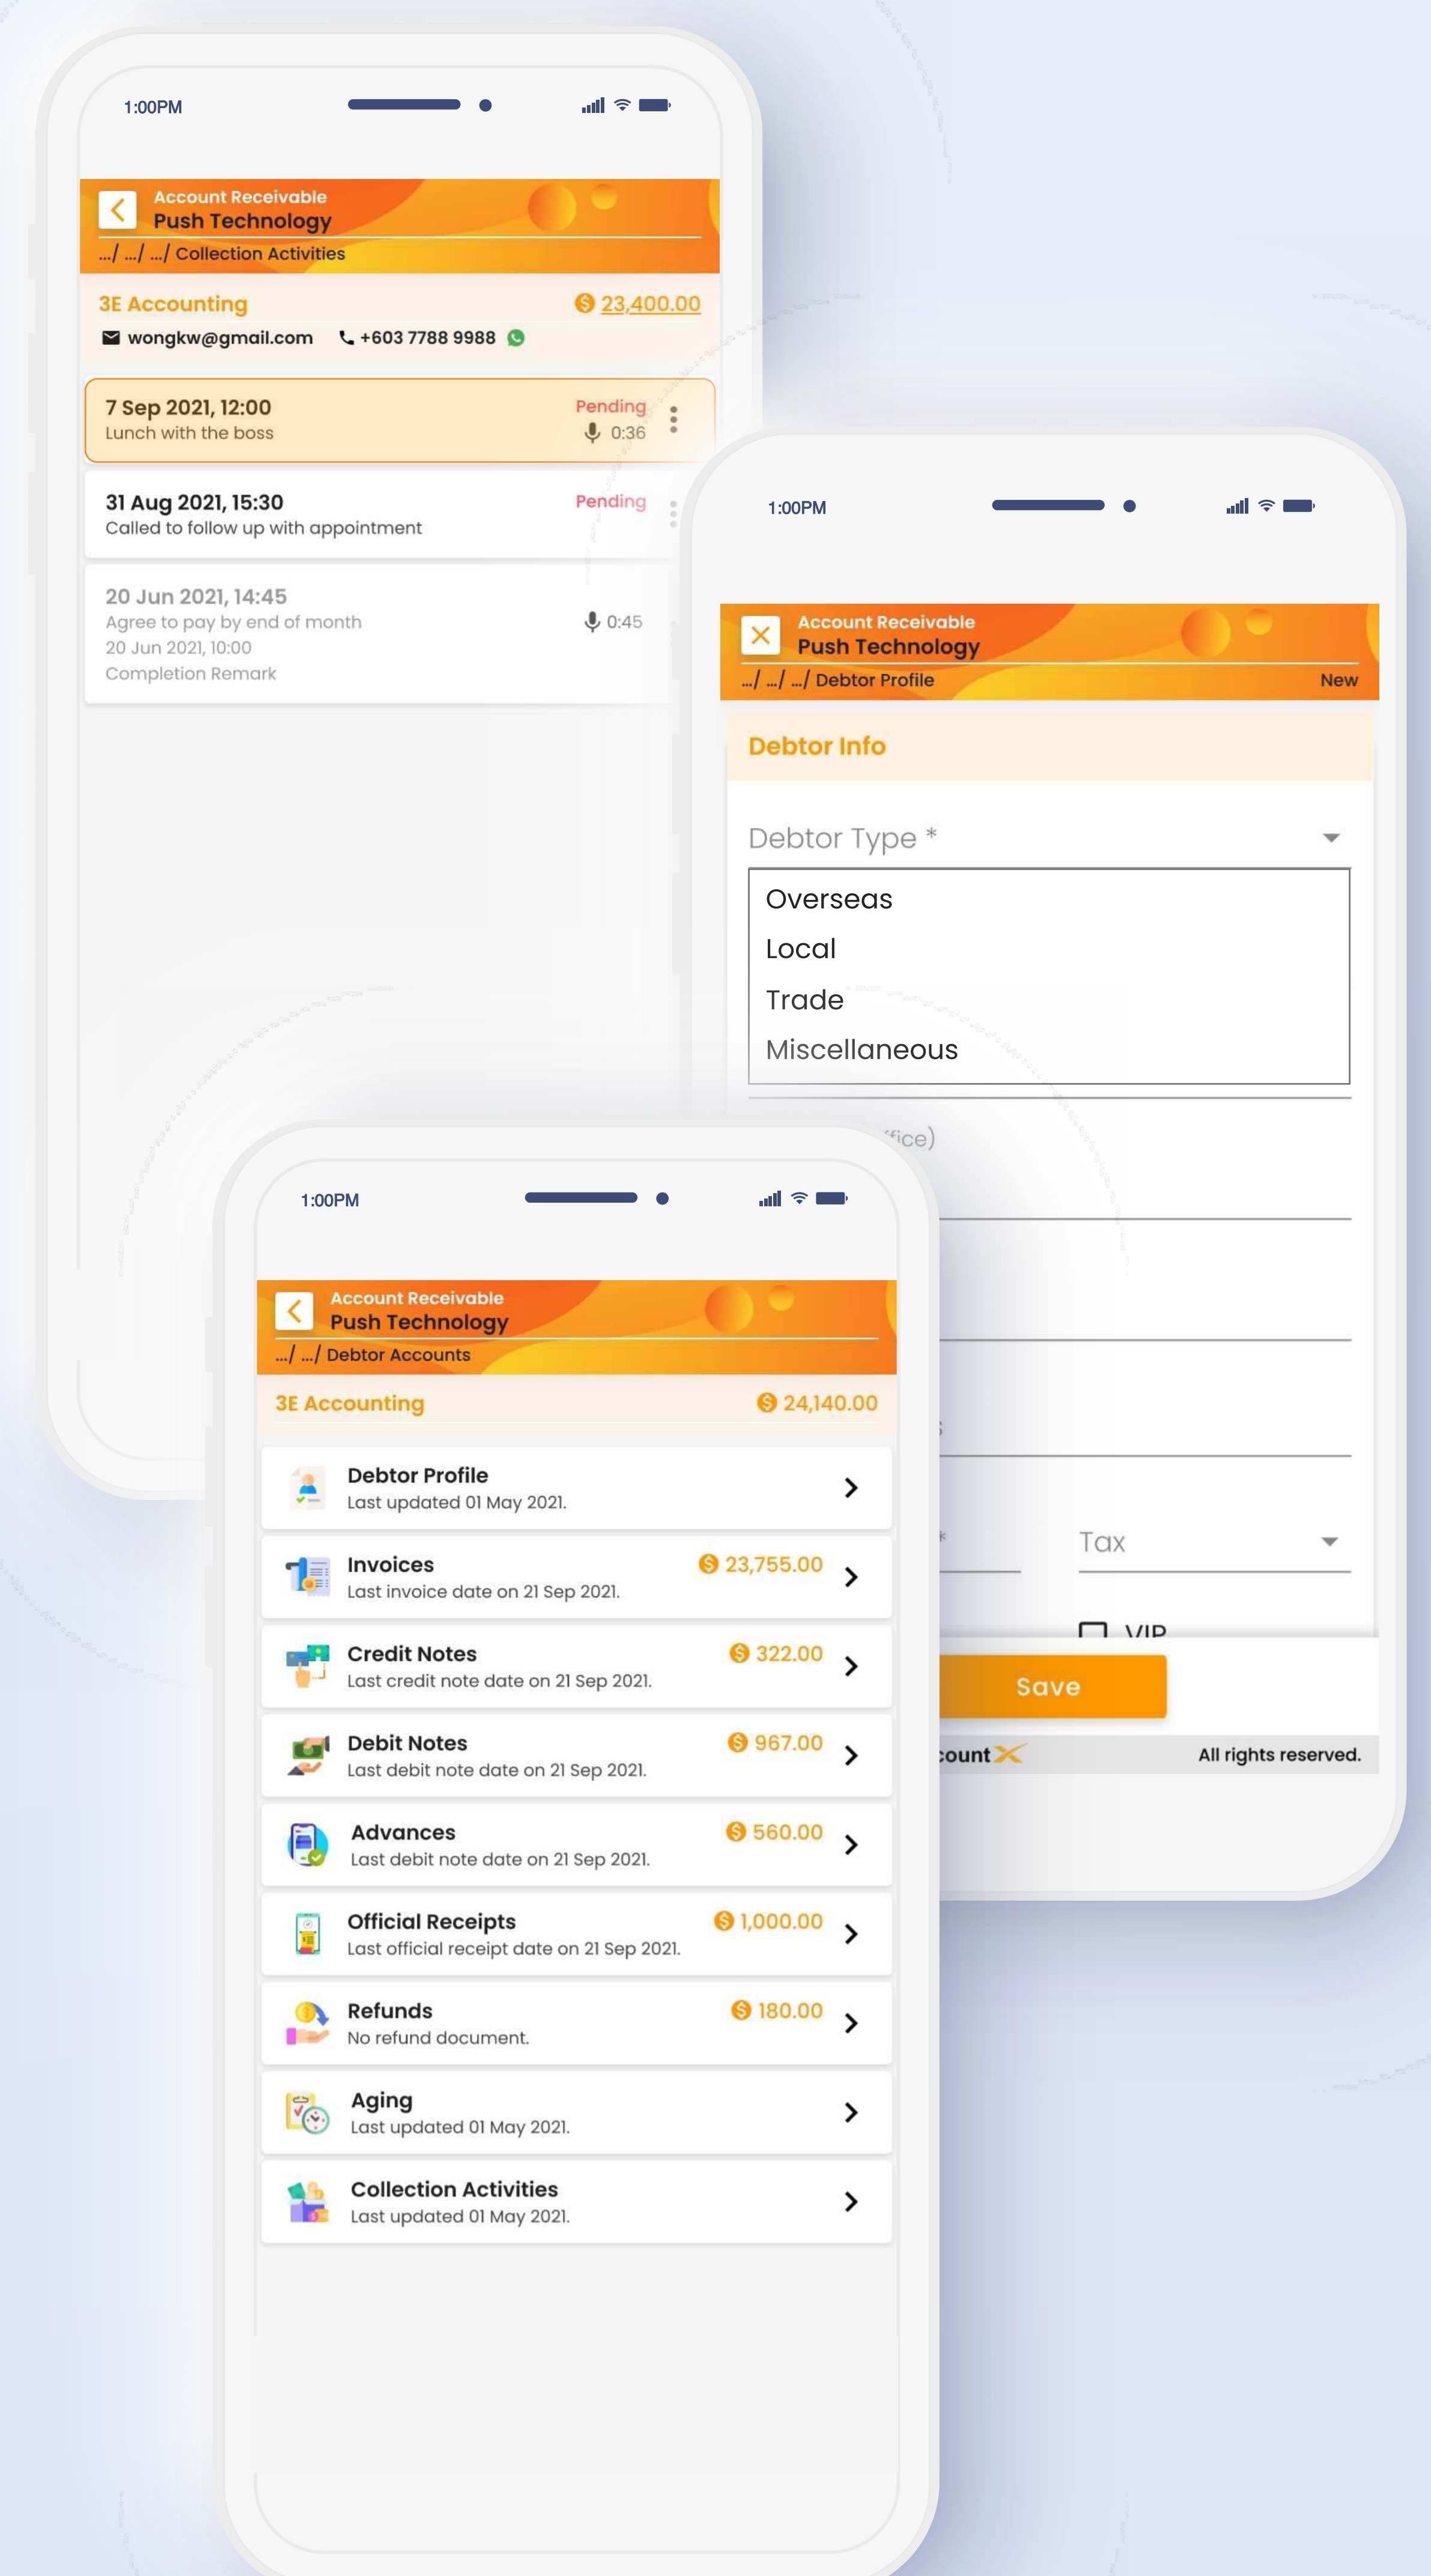

AccountX automates the areas of AR that matter the most to your business, from billing, collection and credit control functions.

You can classify your debtors by “Type”, eg overseas or local debtor or Trade and miscellaneous debtor.

All AR transactions are supported such as Invoice, Credit Note, Debit Note, Advances, Official Receipt and Refund. Transactions can be entered as draft and can be submitted later for approval when its ready. U can approval transaction individually or by bulk.

For credit control, collection activities can be planed and recorded. Late payment interest can be generated anytime based on grace periods, credit terms, and interest rates.

AccountX provides a list of debtor accounts sorted by amount owed. This allows you to determine who owes you the most. You can have a summary of a debtor's account, its aging, and a detailed statement of transactions for each debtor.

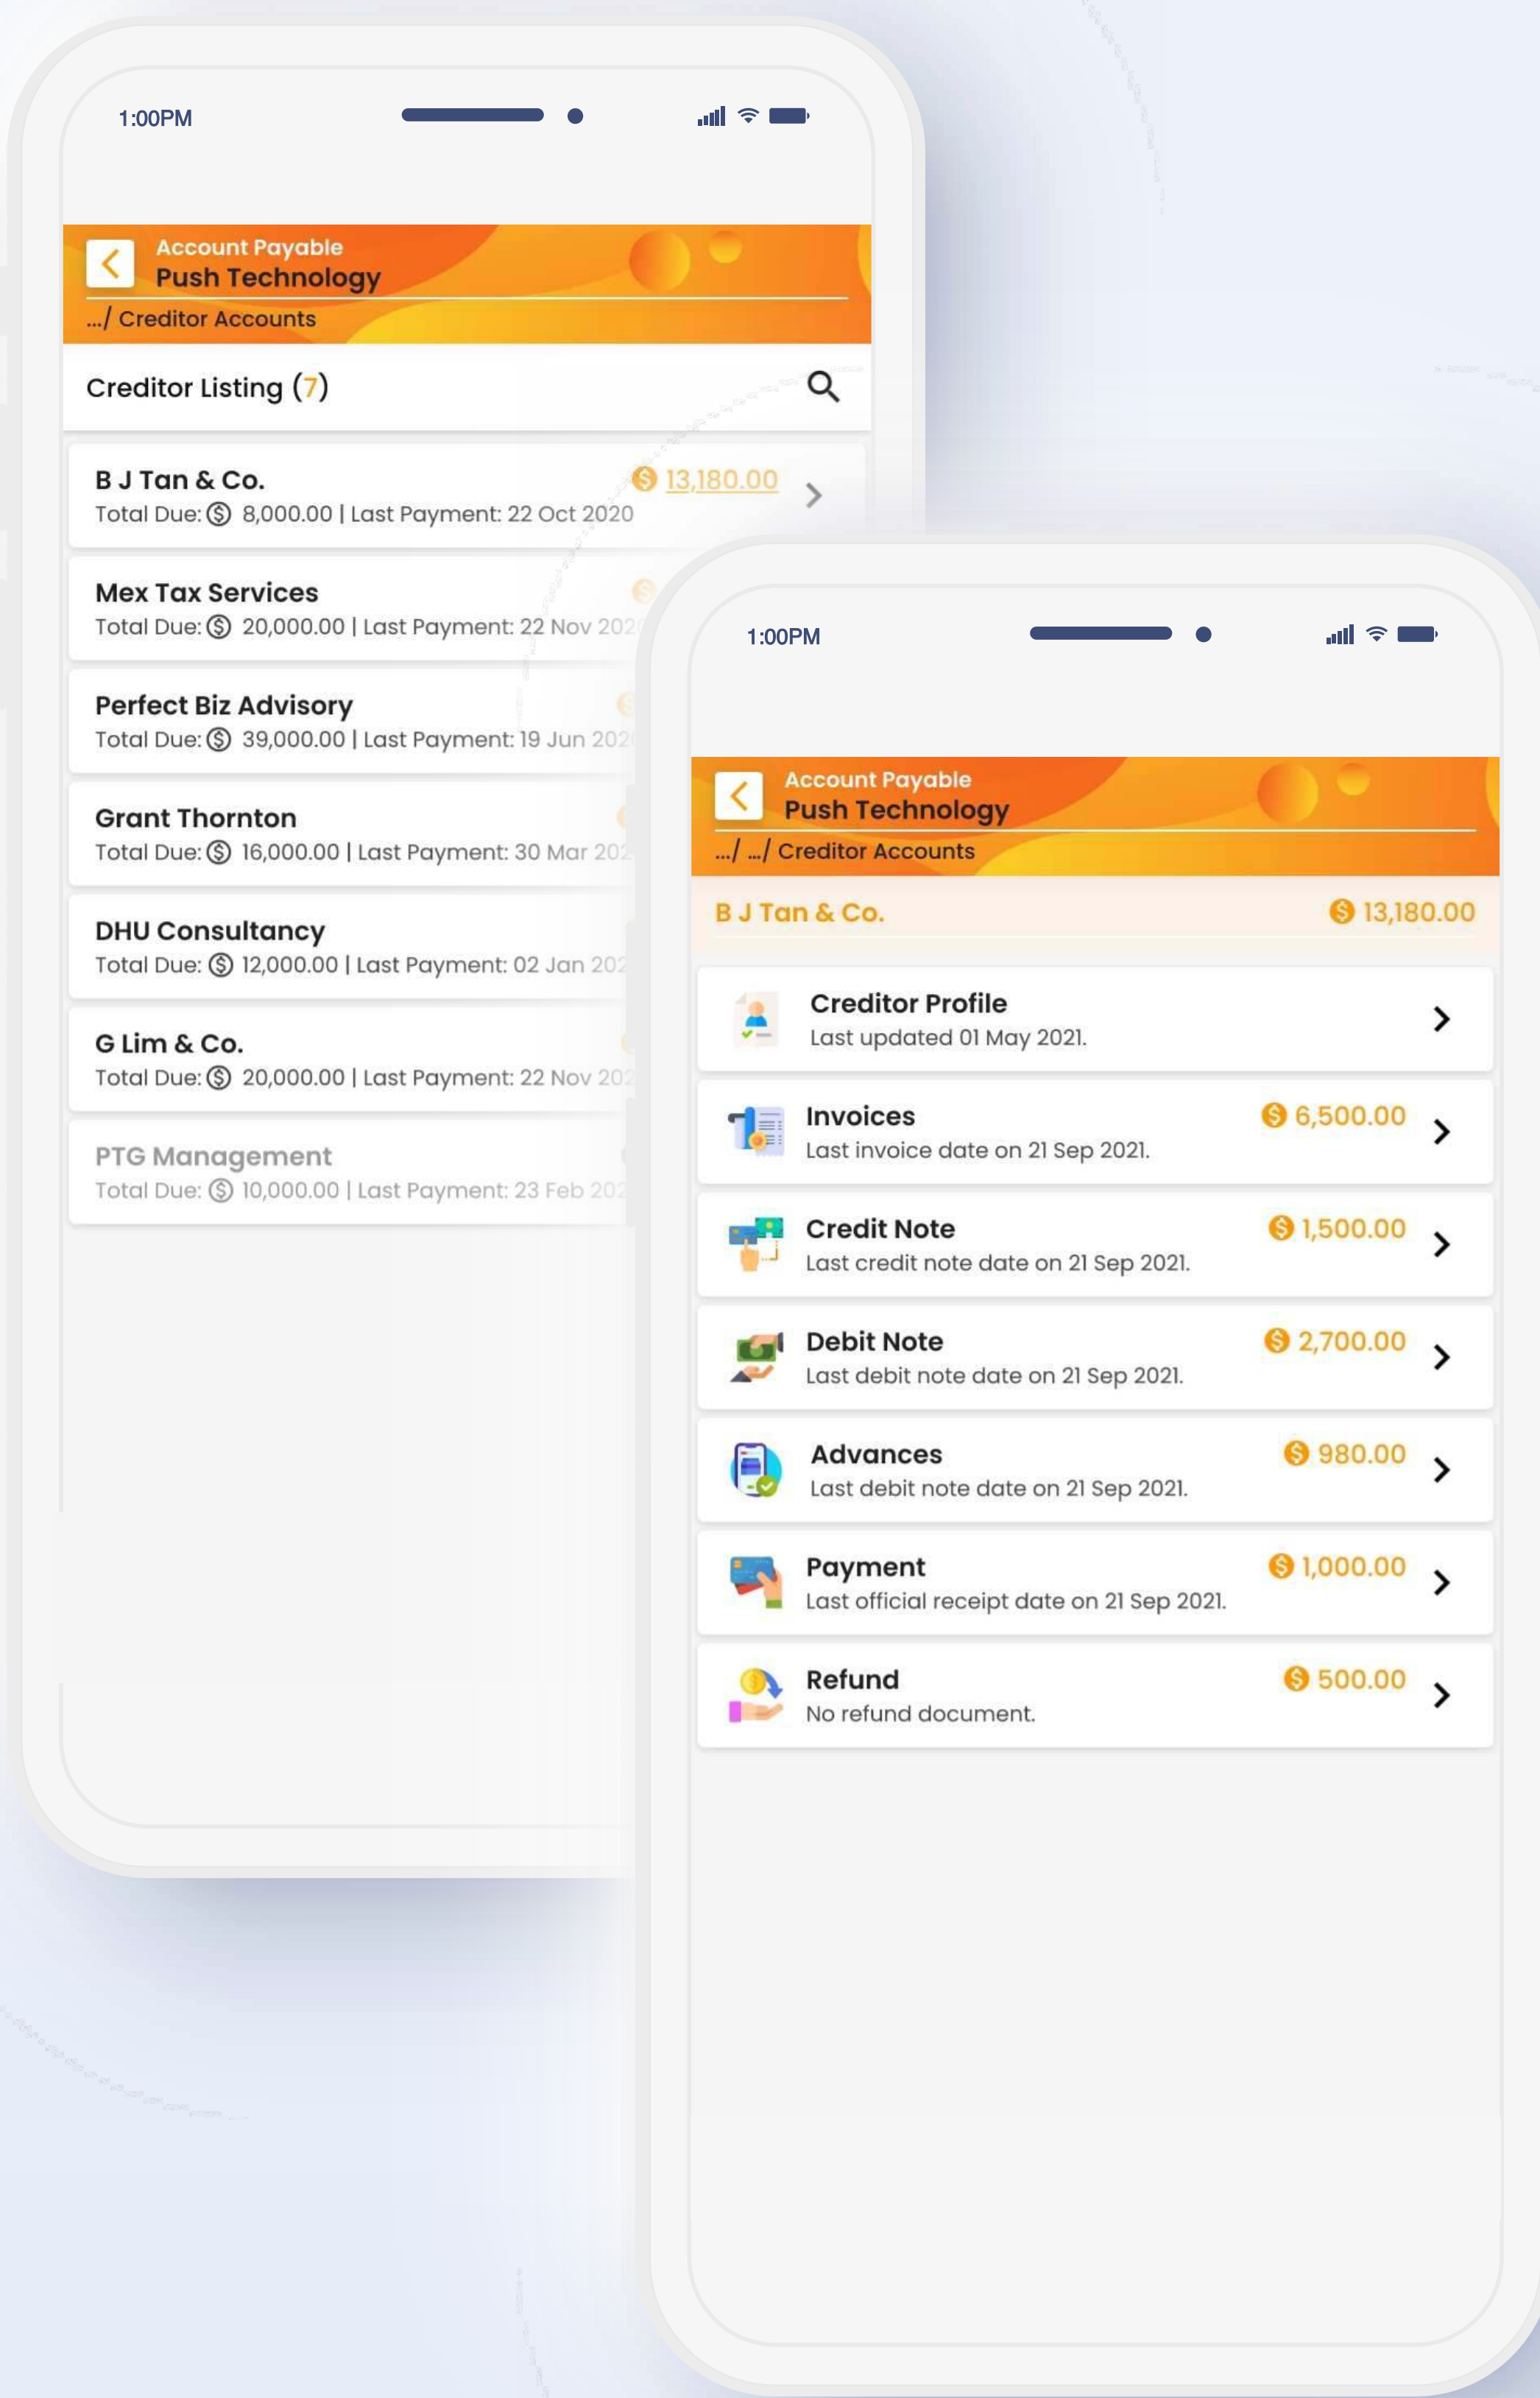

Account Payable.

AccountX makes it easy for you to manage your creditors. It addresses all types of creditors for your organisation, be it be trade and non-trade.

It tracks all payable transactions, such as Advances, Invoices, Credit Note, Debit Note, Payment and Refund. It validates creditors' invoices using a three-way matching concept (PO-DO-Invoice).

AccountX provides a list of creditor accounts sorted by amount owed. This allows you to determine who owes you the most. You can have a summary of a creditor's account, its aging, and a detailed statement of transactions for each creditor.
